

Adenoid Cystic Carcinoma - Risk Factors [1]

This section has been reviewed and approved by the [Cancer.Net Editorial Board](#) [2], 10/2014

ON THIS PAGE: You will find out more about the factors that increase the chance of developing this type of cancer. To see other pages, use the menu on the side of your screen.

A risk factor is anything that increases a person's chance of developing cancer. Although risk factors often influence the development of cancer, most do not directly cause cancer. Some people with several risk factors never develop cancer, while others with no known risk factors do. However, knowing your risk factors and talking about them with your doctor may help you make more informed lifestyle and health care choices.

The cause of AdCC is not known at this time, and risk factors for this type of cancer have not been proven consistently with scientific research. There is some evidence that the *p53* tumor suppressor gene is somehow inactivated in advanced and aggressive forms of AdCC. The *p53* gene limits cell growth by monitoring the rate at which cells divide.
