Doctors are working to learn more about breast cancer, ways to prevent it, how to best treat it, and how to provide the best care to people diagnosed with this disease. The following areas of research may include new options for patients through clinical trials. Always talk with your doctor about the diagnostic and treatment options best for you.

- New surgical methods that save tissue or prevent scarring are being tested in clinical trials.
- Improved radiation therapy to lower the risk of side effects
- New therapies and combinations of therapies, including chemotherapy, hormonal therapy, and targeted therapy are being studied in clinical trials.
- Clinical trials are underway to find better ways of reducing symptoms and side effects of current breast cancer treatments in order to improve patients' comfort and quality of life.
