[Leukemia - Acute Lymphocytic - ALL - Symptoms and Signs](#) [1]

This section has been reviewed and approved by the [Cancer.Net Editorial Board](#) [2], 01/2016

ON THIS PAGE: You will find out more about body changes and other things that can signal a problem that may need medical care. To see other pages, use the menu.

People with ALL may experience the following symptoms or signs. Sometimes, people with ALL do not have any of these changes. Or, the cause of a symptom may be another medical condition that is not cancer.

- Fatigue
- Weakness
- Easy bruising
- Bleeding that does not stop easily
- Pale skin
- Red, pinhead-sized spots on the skin

- Weight loss
- Fever
- Bone or abdominal pain
- Difficulty breathing or shortness of breath
- Frequent infections or infections that come back
- Swollen lymph nodes, also called glands
- Enlarged liver or spleen
- In women, menstruation that lasts longer than usual
- Dizziness
- Headache
- Blurred vision
- Nausea and vomiting

If you are concerned about any changes you experience, please talk with your doctor. Your doctor will ask how long and how often you've been experiencing the symptom(s), in addition to other questions. This is to help find out the cause of the problem, called a [diagnosis](#) [3].

If leukemia is diagnosed, relieving symptoms remains an important part of care and treatment. This may also be called symptom management, palliative care, or supportive care. Be sure to talk with your health care team about symptoms you experience, including any new symptoms or a change in symptoms.

The [next section in this guide is Diagnosis](#) [3]. It explains what tests may be needed to learn more about the cause of the symptoms. Or, use the menu to choose another section to continue reading this guide.
