[Lymphoma - Hodgkin - Childhood - Latest Research](#) [1]

This section has been reviewed and approved by the [Cancer.Net Editorial Board](#) [2], 08/2015

ON THIS PAGE: You will read about the scientific research being done now to learn more about this type of cancer and how to treat it. To see other pages, use the menu on the side of your screen.

Doctors are working to learn more about Hodgkin lymphoma, ways to prevent it, how to best treat it, and how to provide the best care to children diagnosed with this disease. The following areas of research may include new options for patients through clinical trials. Always talk with your child's doctor about the diagnostic and treatment options best for your child.

- **New drugs.** To reduce side effects and improve the effectiveness of treatment, it is important for researchers to find new drugs, as well as new combinations of current drugs.
- **Targeted therapy.** Targeted therapy is a treatment that targets specific genes, proteins, or the tissue environment that contributes to cancer growth and survival. As mentioned in [Treatment Options](#) [3], recent studies are evaluating antibodies—such as brentuximab vedotin (SGN-35)—directed against proteins on the Hodgkin lymphoma cells. Learn more about the basics of [targeted treatments](#) [4].
- **ALLO stem cell transplantation.** As explained in the [Treatment Options](#) [5] section, stem cell transplantation is sometimes used to treat Hodgkin lymphoma. Doctors are researching increasing the use of stem cell transplantation, including ALLO transplantation using donor blood stem cells to replace the patient's bone marrow (called allogeneic

transplantation).

- **Personalized treatments.** The major goal of Hodgkin lymphoma research is to improve treatment effectiveness while reducing long-term side effects. Early response of the disease to a specific treatment is being studied as a method to tailor therapy to the individual. Shorter, more intensive regimens may improve effectiveness. It is important that researchers learn which patients need radiation therapy and which patients may be cured without the long-term side effects of radiation exposure.
- **Palliative care.** Clinical trials are underway to find better ways of reducing symptoms and side effects of current Hodgkin lymphoma treatments in order to improve patients' comfort and quality of life.

Looking for More about Latest Research?

If you would like additional information about the latest areas of research regarding childhood Hodgkin lymphoma, explore these related items that take you outside of this guide:

- To find clinical trials specific to your diagnosis, talk with your child's doctor or [search online clinical trial databases now](#) [6].
- Visit ASCO's [CancerProgress.Net](#) [7] website to learn more about the historical pace of research for childhood cancer, called pediatric cancer, including lymphoma. Please note this link takes you to a separate ASCO website.
- Visit the website of the [Conquer Cancer Foundation](#) [8] to find out how to help support research for every cancer type. Please note this link takes you to a separate ASCO website.

The [next section in this guide is Coping with Side Effects](#) [9] and it offers some guidance in how to cope with the physical, emotional, and social changes that cancer and its treatment can bring. Or, use the menu on the side of your screen to choose another section to continue reading this guide.
