

## **[Neuroblastoma - Childhood - Introduction](#) [1]**

**This section has been reviewed and approved by the [Cancer.Net Editorial Board](#) [2], 04/2016**

**ON THIS PAGE:** You will find some basic information about this disease and the parts of the body it may affect. This is the first page of Cancer.Net's Guide to Childhood Neuroblastoma. To see other pages, use the menu. Think of that menu as a roadmap to this full guide.

Cancer begins when healthy cells change and grow out of control, forming a mass called a tumor. A tumor can be cancerous or benign. A cancerous tumor is malignant, meaning it can grow and spread to other parts of the body. A benign tumor means the tumor can grow but will not spread.

### **About neuroblastoma**

Neuroblastoma is a solid cancerous tumor that begins in the nerve cells outside the brain of infants and young children. It can start in the nerve tissue near the spine in the neck, chest, abdomen, or pelvis, but it most often begins in the adrenal glands. The adrenal glands are located on top of both kidneys. These glands make hormones that help control body functions, such as heart rate and blood pressure.

Neuroblasts are immature nerve cells found in unborn babies. Normal neuroblasts mature into nerve cells or adrenal medulla cells, which are cells found in the center of the adrenal gland. Neuroblastoma forms when neuroblasts don't mature properly.

Sometimes, babies are born with small clusters of neuroblasts that eventually mature into nerve cells and do not become cancer. A neuroblast that does not mature can continue to grow, forming a mass called a tumor.

Neuroblastoma develops most often in infants and children younger than 5. It can form before

the baby is born and can sometimes be found during a prenatal (before birth) ultrasound. Most often, however, neuroblastoma is found after the cancer has spread to other parts of the body, such as the lymph nodes, which are tiny, bean-shaped organs that help fight infection, liver, lungs, bones, and bone marrow, the spongy, red tissue in the inner part of large bones.

## Looking for More of an Introduction?

If you would like more of an introduction, explore these related items. Please note these links will take you to other sections on Cancer.Net:

- ASCO Answers Fact Sheet: [Read a 1-page fact sheet](#) [3] that offers an introduction to this type of cancer. This fact sheet is available as a PDF, so it is easy to print out.
- Cancer.Net Patient Education Video: [View a short video](#) [4] led by an ASCO expert in childhood cancer that provides basic information and areas of research.

*The [next section in this guide is Statistics](#) [5]. It helps explain how many people are diagnosed with this disease and general survival rates. Or, use the menu to choose another section to continue reading this guide.*
