Finding a Clinical Trial [1]

This section has been reviewed and approved by the [Cancer.Net Editorial Board](#) [2], 11/2013

To find a clinical trial, a good first step is to talk with your doctor. Because new clinical trials are created constantly, many people also look in other places to find research studies that they may be interested in joining.

The organizations listed below in alphabetical order offer free, searchable listings of cancer clinical trials. (Please note that if you select one of these websites, you will leave Cancer.Net.) Other organizations that offer such search engines include individual medical/cancer centers, pharmaceutical companies, and [patient advocacy organizations](#) [3].

Center for Information and Study on Clinical Research Participation (CISCRP) [4]. CISCRP offers an online clinical trials search engine at [SearchClinicalTrials.org](#) [5]. In addition, they provide a toll-free number where patients can receive help locating a clinical trial.

CenterWatch [6]. This is a publishing and information services company that offers a list of institutional review board (IRB)-approved clinical trials.

ClinicalTrials.gov [7]. This database of publicly and privately supported clinical trials is maintained by the National Library of Medicine at the NIH. It provides information about more than 100,000 studies involving patients that are researching a wide variety of diseases and conditions, including cancer, in all 50 states and more than 150 countries.

Coalition of Cancer Cooperative Groups [8]. This organization provides resources and information about clinical trials, including the ability to search for clinical trials. Patients can also talk with a specialist to help find a clinical trial.

EmergingMed Navigator [9]. EmergingMed offers a phone and Internet-based service that identifies clinical trial options that match a patient's specific diagnosis, stage and treatment history. Clinical trial specialists provide telephone support upon request to help connect eligible patients with IRB-approved study sites that are enrolling new participants.

National Cancer Institute (NCI) Clinical Trials [10]: The NCI, part of the National Institutes of Health, is the federal agency that provides funding for most U.S. cancer clinical trials. This comprehensive site provides information on both open and closed cancer clinical trials that are

funded by the government, as well as many sponsored by pharmaceutical companies, medical centers, and some international organizations.

WHO International Clinical Trials Registry Platform Search Portal [11]. The World Health Organization (WHO) coordinates health matters within the United Nations. This database allows people to search clinical trial registration information from many countries? registries.

Disease-specific listing

Below is a free search engine that provides clinical trials listings for a specific type of cancer.

BreastCancerTrials.org [12]. This is a not-for-profit online service that helps users to find breast cancer-specific clinical trials that might be right for them. The site offers study summaries, a way for users to share their online health history with research sites, and an alert service that notifies users of recently added clinical trials. BreastCancerTrials.org includes studies sponsored by the NCI, public research foundations, and the pharmaceutical/biotechnology industry.
