About ASCO's Recommendations [1]

Read ASCO's complete 2013 Top Five list for oncology care and treatment, along with scientific sourcing, at www.asco.org/topfive [2].

To help doctors give their patients the best possible care, ASCO asks its medical experts to develop evidence-based recommendations for specific areas of cancer care. Due to the rapid flow of scientific information in oncology, new evidence may have emerged since the time a recommendation was developed. As a result, recommendations such as these may not reflect the most recent evidence. Because the treatment options for every patient are different, recommendations are voluntary and are not meant to replace your physician's independent judgment. The decisions you and your doctor make will be based on your individual circumstances. These recommendations may not apply in the context of clinical trials.

The information in this patient guide is not intended as medical or legal advice, or as a substitute for consultation with a physician or other licensed health care provider. Patients with health-related questions should call or see their physicians or other health care provider promptly and should not disregard professional medical advice, or delay seeking it, because of information encountered in this article. The mention of any product, service, or treatment in this guide should not be construed as an ASCO endorsement. ASCO is not responsible for any injury or damage to persons or property arising out of or related to any use of this patient guide, or to any errors or omissions.
